### Mac's Custom Tie-Downs

Mac's Custom Tie-Downs has acquired Engineered Rubber Products, now offering The Chassis Stabilizer, a tool specifically designed to stabilize vehicles while they're being towed to prevent unwanted chassis flex. This product features an inflatable bladder that limits chassis movement; an ultra thin profile; easy, quick inflation with optional six- or 12-foot filler hoses; and more. Contact Mac's Custom Tie-Downs, PO Box 1140, Sagle, ID 83860; 800/666-1586.

### Billet Connection

Billet Connection has developed a new patent-pending billet aluminum oil filter assembly. This filter assembly is designed to allow the user to inspect the filter element without draining or leaking any oil, unbolting or loosening any fasteners or fittings and without losing any oil out of the oil system. This can be done in seconds after the engine is shut off, even when filtering non-transparent fluids like engine oil. Contact Billet Connection, N. 7320 Regal St., Spokane, WA 99217; 509/467-7584.

## 60 Ft. Drop

To learn more about our all-new carbon drivetrain components, visit [driveshaftshop.com](http://driveshaftshop.com)

### Reduce your 60 ft. times with the all-new DSS Carbon Driveshaft.

Carbon driveshafts offer many advantages over their steel counterparts. For starters, they're almost 40% lighter than steel. But the true advantage of carbon over steel comes from its pliability. Carbon driveshafts offer over 30% more torsional twist than steel which results in lighting fast energy transfer to reduce 60 ft. times. The inherent density of carbon also reduces transfer shock in your driveline, resulting in less wear and tear. Sound impossible? Good, because "We specialize in the impossible".
